Interim Biogeographic Regionalisation for Australia, Version 7
 This map depicts the Interim Biogeographical Regionalisation for Australia (IBRA) version 7 subregions. IBRA subregions represent a landscape based approach to classifying the land surface, including attributes of climate, geomorphology, landform, lithology, and characteristic flora and fauna. Specialist ecological knowledge combined with appropriate regional and continental scale biophysical data sets were interpreted to describe these regions. 419 IBRA sub regions exist across Australia.

Data source:
 IBRA version 7 (2012) was developed through co-operative efforts of the Australian Government Department of Agriculture, Water and the Environment and State/Territory land management agencies.
